* Explain the difference between the == operator and the === operator.
    - Because of this, expressions like 0 == false and "" == false are also true. if you use === the type conversion doesn't happen
* Explain what a closure is. (Note that JavaScript programs use closures very often.)
    - Being able to refer to local variables that are in a enclosing function
* Explain what higher order functions are.
    - a higher order function is a function that accepts an other fuction as a argument
* Explain what a query selector is and give an example line of JavaScript that uses a query selector.
    - a query selector returns the first element that matches and in specified in the CSS selector. For example : document.querySelector("h1"); which selects the <h1> tags
